

Turn Your LinkedIn Into a Job Magnet Using Claude AI

The Exact Prompts — Headline, About, Experience, Skills, Featured Section, and More

Recruiters do not wait for applications. They search LinkedIn every single day. They type in keywords, filter by location, look at headlines and about sections, and message the people who show up and look right. This guide gives you the exact Claude prompts to make sure that person is you.

What You Need — All Free

Item	What It Is	How to Get It
Claude account	claude.ai — the free version works for this entirely	Go to claude.ai and sign up. Free, no credit card.
Your LinkedIn as PDF	Your complete profile downloaded in one file — Claude reads it instantly	LinkedIn profile → More (three dots) → Save to PDF
2-3 Job Descriptions	Job postings for your target role from LinkedIn or company sites	Copy and paste from LinkedIn searches for your target role

Why upload as PDF instead of copying and pasting: The PDF captures your complete profile including certifications, publications, and sections you might forget to copy. Claude reads it instantly. One drag-and-drop, no extra steps.

What Claude Produces From One Prompt

Part	What Claude Writes	What Changes
Headline	3 optimized versions under 220 characters with keywords and achievement numbers	Moves from generic to keyword-rich and searchable
About Section	300-350 words with hook, 12 embedded keywords, story, and call to action	Stops recruiter scrolling and invites them to message you
Experience Bullets	Every bullet rewritten — action verb, quantified outcome, keyword-mirrored	Shows what you did and what it meant — not just what you were responsible for

Skills Section	50 skills in priority order using exact LinkedIn terminology	Shows up in recruiter filters — endorsed skills rank highest
Featured Section	Recommendations for what to feature with caption text for each item	First thing recruiters see after headline — should show work, not just titles
Profile Checklist	10 specific additional optimizations beyond what was rewritten	Covers photo, connection count, creator mode, and more

Prompt 1: The Main LinkedIn Optimization Prompt

Upload your LinkedIn PDF to Claude, then paste this entire prompt. Replace [YOUR TARGET ROLE], [YOUR CITY], and the job description placeholders at the bottom. Do not change anything else.

Set the context:

You are a LinkedIn optimization expert helping international students get found by US recruiters and hiring managers.

I have uploaded my LinkedIn profile as a PDF. I am also going to paste two job descriptions for my target role below.

Read my full profile from the PDF and rewrite every section so that recruiters searching for my target role find me first — and when they land on my profile they immediately want to message me.

My target role: [YOUR TARGET ROLE e.g. Data Analyst]

My location: [YOUR CITY e.g. Houston, Texas]

My status: Open to full time roles — available immediately

PART 1 — HEADLINE

Write 3 versions of my LinkedIn headline. Each under 220 characters.

Rules:

- First two words must be my target job title
- Include 4 to 5 most searched technical skills for this role
- Include one specific achievement number from my profile
- End with 'Open to Full Time Roles' or 'Available Immediately'
- Never use: Student, Graduate, Seeking Opportunities, or Passionate

Version 1 — maximum keyword searchability

Version 2 — keywords plus strongest achievement number

Version 3 — keywords plus niche specialization

For each version explain which keywords you prioritized and why.

PART 2 — ABOUT SECTION

Rewrite my about section. 300 to 350 words.

Must do four things:

1. Hook in the first line. Must not start with 'I am.' Must open with a specific achievement, a bold statement, or a problem I solve. Make a recruiter stop scrolling.
2. Embed the top 12 most searched keywords for my target role naturally throughout the section. List those 12 keywords separately after the about section.
3. Tell my story. What problems I solve. What makes my background unique. What kind of work I love doing. Sound like a real human not a resume.
4. End with a specific call to action. Open to full time [role] roles in [city]. Feel free to message me.

PART 3 — EXPERIENCE BULLETS

Rewrite every bullet in my experience section.

Rules:

- Every bullet starts with a strong past tense action verb
- Every bullet has at least one number — percentage, dollar amount, team size, records processed, time saved
- Maximum 4 bullets per role — pick the most impressive ones
- Mirror keywords from the job descriptions I am providing
- Replace any passive language with confident active language
- Keep all existing numbers from my profile — do not reduce or change them

PART 4 — SKILLS SECTION

Give me exactly 50 skills to add to LinkedIn in priority order.

Priority 1 — top 10: exact skills recruiters filter by most for my target role

Priority 2 — next 20: supporting technical skills from my profile and the job descriptions

Priority 3 — final 20: broader skills that expand searchability

Use exact LinkedIn terminology — 'Apache Spark' not just 'Spark', 'Amazon Web Services' not just 'AWS'.

Tell me the top 5 skills I should ask connections to endorse first.

PART 5 — FEATURED SECTION

I have a personal portfolio website and GitHub.

Recommend exactly what to feature and write the caption text for each featured item.

The caption should tell a recruiter what they will see before they click.

PART 6 — PROFILE CHECKLIST

Give me 10 specific things to complete or optimize on my profile beyond what you already rewrote. Be specific — not vague advice.

RULES FOR EVERYTHING:

- Never use: passionate about, hardworking, team player, seeking opportunities, responsible for, assisted in, helped with
- Do not mention visa status or OPT anywhere
- Write for two audiences — the LinkedIn algorithm and the human recruiter
- Base all keyword choices on the actual job descriptions I am providing

HERE ARE THE JOB DESCRIPTIONS:

Job Description 1: [PASTE FIRST JOB DESCRIPTION HERE]

Job Description 2: [PASTE SECOND JOB DESCRIPTION HERE]

How to run this prompt: Open claude.ai. Upload your LinkedIn PDF by dragging it into the chat. Then paste this entire prompt — replace the placeholders at the bottom with your actual job descriptions. Claude reads the PDF and the job descriptions together and rewrites everything in one response.

Prompt 2: Keyword Gap Checker (Use After 2 Weeks)

If your LinkedIn search appearances are not growing after two weeks, run this follow-up prompt in a new Claude chat to find what is still missing.

I updated my LinkedIn profile two weeks ago using AI optimization. My search appearances are not growing as much as expected.

Here is my current LinkedIn headline:

[PASTE YOUR CURRENT HEADLINE]

Here is my current About section:

[PASTE YOUR CURRENT ABOUT SECTION]

My target role is [TARGET ROLE] in [CITY].

Based on what you see, answer these four questions:

1. What are the top 10 keywords that [target role] recruiters search for most on LinkedIn that are NOT currently in my headline or about section?
2. Which of these missing keywords should I add to my headline — and give me a rewritten headline that adds the most important ones without going over 220 characters.
3. Give me 3 specific sentences I can add to my About section to naturally embed the top missing keywords.
4. Which skills should I add to my LinkedIn skills section immediately to show up in more recruiter filters?

When to use Prompt 2: Run it every 2 weeks if search appearances are flat. LinkedIn's algorithm rewards fresh content and updated profiles. A small keyword addition can move you from page 3 to page 1 of recruiter search results.

Prompt 3: Weekly LinkedIn Post Generator

Posting once a week on LinkedIn boosts your algorithm visibility — active accounts appear more in recruiter searches. This prompt writes it for you in 30 seconds.

Write a LinkedIn post for me. I want to post once a week to stay visible to recruiters and build my professional presence.

My target role: [TARGET ROLE]

My background: [1-2 sentences about your experience]

Topic for this week's post: [CHOOSE ONE BELOW]

Topic options — pick one:

- Something I learned this week about [tool or skill]
- A project I worked on and what I learned from it
- A mistake I made and how I fixed it
- A tip for other students entering [your field]
- A tool or resource that changed how I work

Rules for the post:

- 80 to 120 words only — short posts perform better
- First line must be a hook that makes people stop scrolling — ask a question or make a bold statement
- Do not use hashtags more than 3
- End with a question to encourage comments
- Do not mention visa status, OPT, or job searching directly
- Sound like a professional sharing an insight — not a student looking for a job

Write 2 versions — one more technical, one more story-driven. I will pick the one that fits best.

Post consistently and your profile visibility compounds. One post per week for 8 weeks increases search appearances significantly. Claude writes it. You review and post. Takes 5 minutes.

Prompt 4: Skill Endorsement Request Message

Endorsed skills rank higher in recruiter searches. Most people say yes when asked directly. Use this prompt to write the message.

Write a short, natural LinkedIn message asking a connection to endorse my top skills.

Context:

- The person I am messaging: [classmate / former colleague / professor / mutual connection]
- How we know each other: [1 sentence]
- The skills I want endorsed: SQL, Python, Tableau, ETL, Power BI (or replace with your top 5)

Rules:

- Under 60 words — short messages get higher response rates
- Be direct and specific — name the skills
- Offer to return the favour
- Sound natural — not copied from a template
- Do not start with 'I hope this message finds you well'

Write 2 versions: one for someone I know well, one for a more formal connection.

Real Before and After: What Claude Changes

These are the exact types of transformations Claude makes. Same person, same experience — completely different impact.

Headline:

Before	After
Masters Student in Data Science at ASU seeking opportunities	Data Analyst — SQL, Python, Tableau, Power BI, Snowflake — ETL Pipelines, 8M+ Records — Open to Full Time Roles Houston
Information Systems Graduate Looking for full time roles	Data Analyst — Saved \$10K Cloud Costs, 100+ Hours Automated Monthly — AWS, PySpark, Python, SQL — Available Now

About Section Opening Line:

Before	After
Data Analyst driving revenue growth and operational efficiency through predictive analytics, A-B testing, and scalable data solutions.	In the last four years I have automated workflows saving 100+ manual hours every month, built ETL pipelines processing 8 million records monthly, and directly contributed to over \$100K in monthly revenue gains — all by doing one thing: turning messy data into decisions that actually move the needle.

Experience Bullet:

Before	After
Engineered scalable ETL pipelines using PySpark, AWS Glue, and Snowflake, reducing data processing time by 30 percent.	Engineered production-grade ETL pipelines using PySpark, AWS Glue, and Snowflake that cut data processing time by 30% — accelerating clinical trial insight delivery for a team of 15+ scientists and reducing time-to-decision from days to hours.

5 Pro Tips to Get the Most From This

Turn on Open to Work for Recruiters Only — not the public banner: Go to Open to Work settings on LinkedIn and choose Recruiters Only. This puts you in recruiter search filters without showing the green banner publicly. Your current employer cannot see it. You look professional, not desperate.

Post once a week — Claude writes it in 30 seconds: Use Prompt 3 in this guide. The LinkedIn algorithm rewards active accounts with higher search visibility. One short post per week for 8 weeks compounds your profile views significantly.

Ask 10 connections to endorse your top 5 skills: Use Prompt 4 in this guide. Endorsed skills rank higher in recruiter searches. The top 5 to get endorsed first: your most technical and most searched skills — SQL, Python, Tableau, or whatever Claude identifies as Priority 1 for your target role.

Connect with 5 people every day in your target field: Recruiters who specialize in your roles. Alumni from your university in your target companies. Hiring managers at companies you want to work at. A larger network means more profile visibility in searches.

Check Search Appearances every Monday morning: Go to LinkedIn profile → Analytics → Search Appearances. Before optimization: most profiles get 5-20 per week. After Claude optimization: aim for 100-200+ within two weeks. If it is not growing, run Prompt 2 — the keyword gap checker.

The Complete Claude AI Job Search Series

Five videos. Five free tools. One complete end-to-end system.

#	Video	What It Builds
1	Claude + Apify Job Scraper	Scrapes freshest jobs posted in the last 24 hours — apply before anyone else
2	ATS Resume Optimizer	Jack Ryan format resume tailored to any job description with keyword verification
3	Hiring Manager Email Finder	Verified email of any hiring manager at any US company in 60 seconds
4	Interview Prediction System	Predicted questions, STAR answers from your resume, mock interview with feedback
5	LinkedIn Optimizer (This Video)	Recruiter-optimized headline, about, bullets, and skills — inbound messages

Five tools. The entire job search journey covered. From finding jobs to getting found. From applying to interviewing. From unknown candidate to hired professional. All free. All Claude.
